

KORUPOLU LATHA

Data Analyst

+91-8555080393 | lathakorupolu0209@gmail.com | [LinkedIn Profile](#) | Visakhapatnam, India

SUMMARY

Results-driven Data Analyst with 2.8+ years of experience translating business questions into structured analyses and actionable insights. Strong hands-on expertise in SQL Server (T-SQL) — including Joins, CTEs, Subqueries, Stored Procedures, Triggers, Views, Window Functions (ROW_NUMBER, RANK, DENSE_RANK, LAG, LEAD), and Query Optimization. Skilled in Power BI with DAX, Power Query, Data Modeling, and Star Schema. Working knowledge of Python (Pandas, NumPy) for data cleaning and SSIS for ETL pipelines. Domain experience spans banking operations and healthcare claims, supported by a strong Mathematics & Statistics background.

EXPERIENCE

Data Analyst

[WNS Global Services Pvt. Ltd.](#)

1.6 Years

- Analyzed customer banking request data to track daily operations, workload distribution, turnaround time (TAT), and SLA compliance across teams.
- Wrote complex T-SQL queries using Inner / Left / Right / Full Outer Joins, Subqueries, CTEs, and Window Functions (ROW_NUMBER, RANK, DENSE_RANK, LAG, LEAD) to extract and shape data from multiple source tables.
- Developed and optimized Stored Procedures, Views, and User-Defined Functions to standardize recurring reporting logic; applied GROUP BY / HAVING with aggregate functions for workload summaries.
- Tuned slow-running queries by analyzing execution plans, adding appropriate indexes (clustered & non-clustered), eliminating SELECT *, and rewriting correlated subqueries as joins — reducing report load time noticeably.
- Built interactive Power BI dashboards using DAX measures (CALCULATE, SUMX, FILTER, DIVIDE), Power Query (M) for data shaping, star-schema data modeling, slicers, drill-through pages, and KPI cards monitoring total, completed, and pending requests.
- Cleaned and validated data in Advanced Excel using Pivot Tables, VLOOKUP/XLOOKUP, INDEX-MATCH, Power Query, and conditional formatting to remove duplicates and fix missing values.

Data Analyst

[Virtual Guard Services \(VGS\) Pvt. Ltd.](#)

1.2 Years

- Analyzed healthcare claims data to track claim status (Approved / Pending / Rejected), operational performance, and root-cause patterns behind rejections.
- Wrote T-SQL queries using multi-table Joins, CTEs, Subqueries, CASE expressions, and Aggregate Functions (SUM, COUNT, AVG, MIN, MAX) with GROUP BY / HAVING to produce claim-level summaries.
- Created and maintained Stored Procedures, Views, and Triggers to automate recurring claim-status reports and enforce data validation at insert/update.
- Used UNION / UNION ALL to combine claim records across source systems and applied COALESCE / ISNULL to handle missing data; applied normalization principles (1NF, 2NF, 3NF) while designing reporting tables.
- Used Python (Pandas, NumPy) for ad-hoc analysis — read_csv, groupby, merge, fillna, dropna, loc/iloc indexing, and basic visualizations with Matplotlib.
- Built dashboards in Power BI and Excel using DAX measures, slicers, filters, and conditional formatting to monitor approved, pending, and rejected claims by payer, category, and aging buckets.

TECHNICAL SKILLS

SQL Server (T-SQL)

Joins (Inner, Left, Right, Full Outer, Self, Cross), Subqueries, Correlated Subqueries, CTEs & Recursive CTEs, Window Functions (ROW_NUMBER, RANK, DENSE_RANK, LAG, LEAD, NTILE), Aggregate Functions, GROUP BY, HAVING, CASE Expressions, UNION / UNION ALL, COALESCE / ISNULL, PIVOT / UNPIVOT

SQL — Database Objects

Stored Procedures, Triggers (AFTER / INSTEAD OF), Views, Indexed Views, User-Defined Functions (Scalar & Inline TVF), Temp Tables, Table Variables, Common Table Expressions

SQL — Performance & Design

Query Optimization, Execution Plan Analysis, Indexing (Clustered & Non-Clustered), Normalization (1NF, 2NF, 3NF), DDL / DML / DCL / TCL, Transactions & ACID properties

Power BI

DAX (CALCULATE, SUMX, FILTER, DIVIDE, ALL, RELATED, time-intelligence functions), Measures vs Calculated Columns, Power Query (M language), Data Modeling, Star & Snowflake Schemas, Slicers, Filters, Drill-through, Bookmarks, KPI Cards, Custom Date Tables

Python

Pandas (DataFrame, Series, read_csv, merge, groupby, pivot_table, fillna, dropna, loc/iloc), NumPy, basic Matplotlib visualization, Data Cleaning & Transformation

Advanced Excel

Pivot Tables, VLOOKUP / XLOOKUP / INDEX-MATCH, SUMIFS / COUNTIFS, Power Query, Conditional Formatting, Data Validation, Charts & KPI Dashboards

ETL & Automation

SSIS (Control Flow, Data Flow, Lookup, Derived Column, Conditional Split), SQL Server Agent (Job Scheduling), Data Cleaning & Validation

Business & Soft Skills

Stakeholder communication, English (verbal & written), adaptability, attention to detail, cross-functional collaboration

EDUCATION

B.Sc. — Mathematics, Statistics & Computer Science (73%)

[Pydah College for Women, Visakhapatnam, India](#)

Coursework: Quantitative Methods, Statistical Analysis, Computer Science Fundamentals

CERTIFICATIONS

Python and SQL Training — NextWave (Virtual Classroom Program)
